

## **How to measure for a vinyl gate**

We have a very easy form to fill out that has blank spots that need to be filled in to have the information that is needed to build a custom vinyl gate.

All wood posts or side attachments will need to be removed prior to installing your gate. That means that we need the gate opening measure both at the top of where the gate will go as well as at the bottom where the gate will go.

Next we need the height on both sides of the opening, this will account for any differences or unevenness of the ground where the gate will swing.

Mark the direction the gate will swing and what side the gate will be hinged on.

Do you want our standard hinges or do you need our Pro Latch that is lockable with a key from either side?

Do you want your hardware to be black or white (black is standard)?

Do you need removal?

Do you want professional installation?

What style of gate do you want?

Do you want white or tan?

Any posts that are not next to a wall or your home will need to be marked with a "d" for dirt if the post will not be mounted on the concrete.

If possible, it is always easier to quote if you send a picture of the existing opening.

Fax your gate measure form to 714-893-9361 or email to [sales@finylvinylproducts.com](mailto:sales@finylvinylproducts.com) we will send back your quote within 48 hours.

If you would like to go ahead with your quote, we will fabricate your gate according to your measurement or for \$30 per gate we will come and take measurements and will guarantee your gate to be fabricated correctly.
